

Projects

MeetMe | [Code](#) | [Visit](#)

- A progressive web application that fetches a list of events from Google Calendar API
- Built with both a test & behavior-driven development approach
- Users can enter a city and a list of suggestions appear, user can also type in the number of events that they want on the screen
- Includes a serverless function hosted by AWS Lambda
- Data is shown in charts via Recharts

Built with:

HTML | CSS | React | AWS Lambda | Google Calendar API | Recharts

Tested with:

Jest | jest-cucumber | Puppeteer

MyFlix API | [Code](#) | [Visit](#)

- RESTful API built with the MERN stack
- Displays a list of movies that users can click on to get movie info
- Membership-based so users can create an account, edit their info and add movies to their favorites list

Built with:

Mongo | Express | React/Redux | Node

Pokémon API App | [Code](#) | [Visit](#)

- Frontend to an API that displays a list of Pokémon names that when clicked, display a modal and lists certain stats
- Utilizes the then() method to return promises
- Buttons, navbar, and modals are styled via Bootstrap

Built with:

HTML | CSS | Bootstrap | jQuery | JavaScript | Ajax
